

# Project: Japanese Animation History Archive

## Description:

The Japanese Animation History Archive is an educational website focused on documenting the historical development of Japanese animation, commonly known as anime. The website examines the evolution of anime across different time periods, highlighting major eras that contributed to its growth and popularity. It also explores influential animation studios and landmark series that helped shape the artistic style, storytelling techniques, and cultural impact of the medium. The purpose of this project is to provide users with structured and reliable information in an easy-to-navigate format. By combining research-based content with interactive web elements, the site aims to enhance user understanding of anime as an important form of global media.

## Pages:

1. Home
2. Anime Eras (1980s–2020s)
3. Studios & Creators
4. Influential Series
5. User Feedback Page
6. About the Project

## Data Description:

The website will store and display information related to Japanese animation history, including anime series, studios, creators, and historical eras. For each anime series, we will store the title, release year, studio, genre, number of episodes, and a brief description. For animation studios, we will store studio name, founding year, and notable works. Additionally, the site will store data about each historical era, including the era name, years it covers, key developments, and influential series. For creators, we will store full name, role (e.g., director, writer, character designer), studio affiliations, notable works, and birth year. Users will be able to view this information freely, and they will also be able to submit feedback or rate pages to help improve the site. Only the administrator will have the ability to add, edit, or delete anime, studio, or era entries, so a secure login system will be implemented for administrative access. All feedback and page ratings will be stored and processed in the database to allow manipulation, analysis, and display in charts or summary tables for both users and the administrator.
